

# Protect your critical information with proactive end-to-end defense capabilities

Securing your information can be a daunting task. The evolution of technology combined with the sophistication of cyberthreats have resulted in an increase in breaches across organizations of all sizes. How do you keep up with these challenges and reduce your risk of exposure?

At AT&T, it's our business to help protect your business. By offering multiple layers of security across applications, devices, networks and platforms, we help reduce your risk of exposure from malicious attacks.

Starting with the network, we take advantage of our unparalleled visibility to look for potential threats as they try to enter our network. Using our patented security analytics, developed from decades of experience, we then pro-actively work to address identified threats before they reach you.

Our portfolio of cybersecurity solutions further extends our end-to-end defense capabilities to help prevent, detect and respond to threats. We also provide tailored solutions to support your unique security and compliance needs through a variety of security consulting services and customized solutions offered through our strategic alliances.

With our experience and breadth of solutions, we can work with you to help secure your critical information.

## Why AT&T?

### Responsive Analytics

- 9.5 petabytes of data analyzed daily
- 3.7B net flow records pass through our analysis engines every hour
- Security Operations Centers analyze data 24 x 7 x 365

### Security Expertise

- Best-in-class security consulting group
- 179 security and privacy patents
- Experts average 15 years' experience in security

### Strategic Alliances

- Modular and flexible approach
- Enhanced value
- Potential cost reduction

### Unparalleled Visibility

- One of the largest IP networks—3800+ MPLS nodes embedded in network
- More than 180 petabytes of data crosses our network daily
- Dedicated Ethernet access in 197 countries and territories

### Threat Management solutions

Helps detect and respond to threats with 24x7 data monitoring and threat analysis conducted by a team of security experts. These solutions can also help:

- Proactively protect your internet connections and improve your website's service availability
- Deliver expertise, tools and management to help mitigate risks posed by viruses, botnets and advanced persistent threats
- Fortify protection with 24x7 data collection, monitoring and analysis

### Firewall Security solutions

Designed to help prevent malicious threats from entering your network and accessing critical data. These solutions also help:

- Defend your network against unauthorized connections and reduce risks of damaging attacks
- Provide expert management and 24x7x365 security monitoring
- Increase productivity by freeing resources to focus on mission-critical business

### Web Security solutions

Capabilities that are designed to help protect your company against threats that can enter your network through the Internet. These solutions also help:

- Provide online filtering and control to help block malware and specific URLs
- Control web content and applications
- Provide proxy utilization and flexible configuration options through optional hybrid configuration

### E-Mail Security solutions

Designed to screen e-mail for malicious attacks and breaches while providing encryption and archiving. These solutions help:

- Protect against advanced persistent threats and spear-phishing attempts from inbound e-mail
- Reduce exposure of your data
- Prevent unauthorized content from leaving the network, helping to avoid potential liabilities

### Mobile Security solutions

Designed to integrate device-level protection for a comprehensive approach to mobile security.

- Compilation of advanced mobility solutions, from network security and device control, to content distribution, workspace management, through the entire lifecycle of application development
- Provides a holistic approach to your mobile strategy
- Helps improve visibility and control of your workforce's mobile devices

### Security Incident and Event Management solutions

Designed to analyze data across your network to correlate alerts and prioritize security events.

- Provides a broad view of your security by efficiently correlating alerts from multiple devices and device types
- Prioritizes security events based on threat and risk management methodologies
- Assists in helping to maintain compliance with government and industry regulations

### NetBond® solutions

Create a highly secure connection between your private network and cloud solutions vital to your business. These solutions help:

- Reduce exposure to security risks by isolating traffic from internet and from other cloud traffic
- Deliver lower latency and higher availability for your applications
- Provide enterprise-grade security

### Cybersecurity Consulting solutions

Customize your approach to security with a team of skilled and certified security consultants. Our trusted advisors can help:

- Develop solutions to help protect data and operate your business effectively
- Provide insight and assistance with your security strategy and roadmap, governance, risk and compliance, Payment Card Industry compliance and security, infrastructure security, vulnerability and threat management, and application security.
- Use your IT security budget efficiently
